

## Preface to the Publication of *Cellular & Molecular Immunology*

Immunology has made numerous important advances over the past decades and is at the forefront in uncovering the mechanisms of human immunological disorders and in eradicating pandemic infectious diseases. Immunological advances have also revealed the mystery of life and death and provided insights into creating a better environment for contemporary human existence. As one of the fast-moving disciplines in modern biomedical sciences, immunological advances are reported in many international journals, some being among the top journals in natural sciences. *Cellular & Molecular Immunology* (CMI) is launched as the first English language journal published by the Chinese Society of Immunology, joining this family of immunological journals. Its goal is to publish the latest research advances in immunology and to strengthen the academic links between immunologists in China and around the world. Immunologists will find CMI a suitable forum to publish their research and express their views. The goal of CMI is to promote academic activities, research collaboration, and mutual understanding between Chinese immunologists and their colleagues around the world.

As this journal continues to grow and develop, we expect a gradual increase in the number of original research and review articles published in CMI. Any suggestions, comments and opinions for this new immunology journal will be warmly welcomed and appreciated.

Wei-Feng Chen, MD, PhD.

Professor, Academician, Chinese Academy of Sciences  
President of Chinese Society of Immunology

Kuang-Yen Chou, PhD

Professor  
Vice-President of Chinese Society of immunology  
Editor-in-Chief
